PLANNING:

Plan your installation carefully. If you use volunteer helpers be sure that they are qualified to assist you. Make certain everyone involved understands that you are the boss and that they must follow your instructions. If you have any doubts at all employ a professional antenna installation company to install your antenna.

ASSEMBLY:

The procedure for assembly of the A743/A744 is straight forward as depicted in the illustrations. See the main pictorial on Page 2 for an overall view of the assembled antenna.

Begin by checking the parts supplied against the combined lists. After removing your antenna from its support, remove the driven element. Remove the center insulator and replace it with the one provided. Complete sub-assemblies as shown in Steps 2 through 5. Notice that Steps 4 and 5 are used for 7 MHz, and Step 6A for 10 MHz. Remove the tubing sections from the ends of your existing driven element. Place the new assembly C over the ends of the 15 meter trap (TC). Adjust the lengths per Step 6B. Place support mast, E, on the boom and feed the support guy line as shown in Step 7. Adjust the support mast until the driven element is parallel to the other elements. Replace the antenna on your tower.
