

MFJ-1703 Antenna/Transceiver RF Safety Switch

The MFJ-1703 is an antenna-to-transceiver switch designed to help protect your radios by ensuring both radios are always connected to an antenna.

OPERATION

The MFJ-1703 uses SO-239 for radio and antenna connections. Connect one antenna to **1** and the other antenna to **2**. Connect one radio to **A** and the other radio to **B**.

The MFJ-1703 is an antenna-to-transceiver switch designed to safely permit an **ANTENNA 1** to a **RADIO A** and at the same time connecting an **ANTENNA 2** to a **RADIO B**.

By moving the front-panel switch to the right, the connections are reversed: **ANTENNA 1** to **RADIO B**, and **ANTENNA 2** to **RADIO A**.

In either switch position, both radios are *always* connected to an antenna.

WARNING: Never transmitter while changing the switch position!

TECHNICAL ASSISTANCE

If you have any problem with this unit first check the appropriate section of this manual. If the manual does not reference your problem or your problem is not solved by reading the manual you may call *MFJ Technical Service* at **662-323-0549** or the *MFJ Factory* at **662-323-5869**. You will be best helped if you have your unit, manual and all information on your station handy so you can answer any questions the technicians may ask.

You can also send questions by mail to MFJ Enterprises, 300 Industrial Park Road, MS 39759; by FAX to **662-323-6551**; or by email to techinfo@mfjenterprises.com. Send a complete description of your problem, an explanation of exactly how you are using your unit, and a complete description of your station.
